Unless otherwise stated we describe  
trends in real terms, adjusting for the  
impact of inflation. Most of our data  
refers to the financial year 2013/14.  
Unless otherwise stated data refers  
to the whole of the UK.

The Almanac would not be possible  
without the contribution of the following  
people and organisations:

- The **Economic and Social Research Council (ESRC)**, particularly Christina Rowley
- **Cazenove Capital Management**, particularly Joanna Barton, Emily Monk and Kate Rogers
- **Third Sector Research Centre**, University of Birmingham, particularly Professor John Mohan and Charles Rahal
- **Centre for Data Digitisation and Analysis**, Queen's University Belfast, particularly Elaine Reid, David Hardy and Anthony Anderson
- **Steers McGillan Eves**, particularly Dot Thompson and Richard McGillan

The Almanac programme of  
work is made possible thanks  
to funding from the  
**Economic and Social  
Research Council (ESRC)**

- **SCVO**, particularly Ilse Mackinnon
- **NICVA**, particularly Andrea Thornbury
- **Charities Aid Foundation**
- **Office for National Statistics**, particularly Sarah Crocker and Gueorguie Vassilev
- **Marc Lawson; Maria Pikoula**

METHODOLOGY 42

The UK Civil Society Almanac is now in its 15th edition. It brings together data from charities' accounts, administrative data and surveys to provide a comprehensive overview of the structure and economy of the UK voluntary sector. In so doing it offers invaluable insights into the ways in which the sector is experiencing growth and change.

# SPONSOR'S FOREWORD

Cazenove Charities are delighted to sponsor the 15th edition of the NCVO UK Civil Society Almanac. As the most comprehensive compendium of voluntary sector trends and statistics, the findings are an important reminder of the sector's breadth and its impact on society.

This year, it is pleasing to note that an increasing number of people are employed in the voluntary sector and that its contribution to the UK economy has risen to around £12.2bn in 2013/14. In a typical month, 27% of the population report that they volunteer and 44% of adults reportedly give money to charitable causes. These are impressive figures and we believe that the Almanac provides essential evidence in support of the sector.

Although investment represents only a relatively small part of the sector's overall income, as the largest investment manager of charitable assets this is the area where we can have most impact working with our clients. Investment income has remained stable over the past few years, despite lower returns from cash and government bonds. This partially reflects a greater use of other investments by charities, but also some growth in the dividends paid by both UK and overseas companies.

I have no doubt that this edition will prove as useful and interesting as those before and provide much material to champion the sector's successes.

# INTRODUCTION

The voluntary sector is a vital part of the fabric of a strong society in the UK. More than 160,000, incredibly diverse, organisations make up the sector and represent a range of sizes, aims and activities. The value of the UK voluntary sector to the wider economy – its Gross Value Added (GVA), or the value of output – was estimated at £12.2bn in 2013/14. To give some idea of the scale of the sector's contribution, voluntary sector GVA is comparable to the nominal GDP of Iceland. The sector also employs some 827,000 people – more than two and a half times the number Tesco employs, and over half the number working for the NHS.

People's goodwill and generosity remains the lifeblood of the sector. During 2014/15, 27% of the adult population reported having volunteered at least once a month, which represents 14.2 million people in the UK. Equally, income from individuals remains the largest source of income for the sector – in 2013/14 it amounted to £19.4bn, a figure that continues to grow.

2013/14 saw a rise in the income of the sector as a whole, to £43.8bn, which was mainly driven by the increase in income from individuals. Income from government rose slightly, to £15.0bn, although this is still lower than its peak in 2008/09 and the longer-term trend is downwards. Levels of government grants to the sector – £2.8bn – are less than half the level they were ten years ago but have not declined further. Most of the recent rise in government income is accounted for by the largest charities.

Indeed in 2013/14 we saw a notable increase in the number of organisations with an annual income over £100m. They make up only 0.02% of all charities by number, but have 18.4% of the total income of the sector, and between 2012/13 and 2013/14 saw their income rise by £1.7bn. We found that because these charities have a disproportionately large effect on the income of the whole sector, from both individuals and government, they warranted a new 'super-major' income category in this year's Almanac.

Just as the sector is diverse in its range and types of organisations, that diversity extends to the stability of organisations' incomes. Smaller charities did not fare as well as large charities. The three smaller income bands experienced decreases in overall income and were less financially secure, mirroring the findings of our recent research on behalf of Lloyds Bank Foundation for England and Wales. The report *Navigating Change* found that organisations with incomes between £25,000 and £1m were more likely to experience volatility and instability in their income. This year's data shows that around one-third of charities with an annual income of less than £1m report having no reserves at all, making them especially vulnerable to external shocks.

In 2013/14, the sector spent £30.1bn on charitable activities. Together with grant making (£5.3bn), 85% of the voluntary sector's total spending went towards achieving its charitable aims. Overall spending is once again highest from social service charities, but average spending per organisation is highest for research charities. In order to maximise the amount of money available for their charitable activities, charities need to spend money in order to generate further funds. Voluntary organisations spent £5.4bn on generating funds in 2013/14 and for every £1 spent, £4.20 was generated in return.

More than nine in ten charities hold some form of assets – such as buildings, cash, investments – which they use to contribute towards their charitable activities or to help generate funds. In 2013/14, the sector's net assets were worth £105.1bn, although half of this sum, £52bn, is held by only 100 organisations.

The data in this year's Almanac does give us some good reasons to be optimistic. For example, the steady rise in income from individuals, the continued high levels of volunteering, and the sheer depth and breadth of services that are provided by charities. But as *The Road Ahead*, our annual publication examining the operating environment for the sector shows, this is no time for complacency. Discussions around fundraising, transparency and accountability will necessitate new – and sometimes challenging – ways of doing things. We are unsure what more recent cuts in public spending will mean for the sector but anticipate that charities will continue to feel the effect of the changes. Many charities will continue to experience unstable and insecure income, and operate with limited reserves. At such times it is incredibly important to not lose sight of why the voluntary sector exists, which is to support people and communities in need, something that it does so very well.

# SIZE AND SCOPE

The voluntary sector is a vital part of the fabric of a strong society in the UK. It is extremely diverse, hosting a vast array of organisations ranging in size, aims and activity. Our analysis of the sector is based on our “general charities” definition (see methodology) which allows comparison of figures from year to year. Under our definition there were 162,965 voluntary organisations in 2013/14.

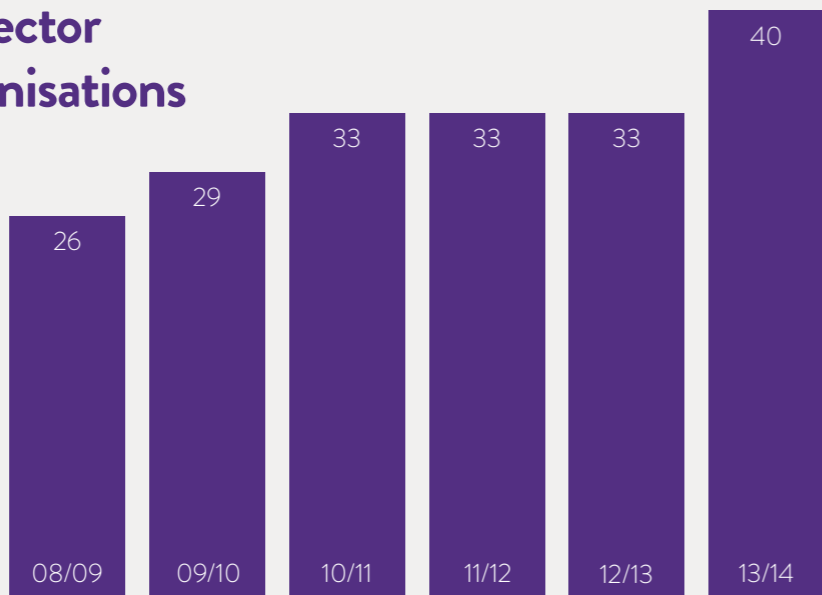

Want to know more about activities of voluntary organisations? Or how different sized organisations are broken down in terms of income, expenditure and assets? [data.ncvo.org.uk/a16size-and-scope](http://data.ncvo.org.uk/a16size-and-scope)

## The majority of the sector consists of small organisations

However, in 2013/14 there was a notable rise in the number of organisations with an income over £100m.

# BENEFICIARIES

Voluntary organisations exist to serve many different types of people as well as the environment, across the UK and internationally. They do so in a number of ways, from grant making to the provision of services or facilities, or giving information and advice.

# GEOGRAPHY

The location of every voluntary organisation in England, Wales and Scotland based on their registered address, 2013/14

Charities are distributed unevenly across the UK. The location of charities reflects where they are registered, not necessarily where their beneficiaries or main activity are located. There appears to be a higher amount of charitable activity in London, for instance, as a greater number of large charities are registered there.

## The largest number of charities and amount of income received are in the areas of highest deprivation

# ECONOMIC VALUE

It is difficult to quantify the value of the UK voluntary sector to the wider economy. We use a method developed together with the ONS that measures gross value added (GVA), or the value of output. In 2013/14 the voluntary sector's gross contribution to the economy was estimated to be £12.2bn.

Want to know how the economic value of the voluntary sector has changed over the last several years?  
[data.ncvo.org.uk/a16economic-value](http://data.ncvo.org.uk/a16economic-value)

The GVA of the voluntary sector is comparable to the nominal GDP of Iceland

<b>National Lottery</b>	Grants from National Lottery distributors. <b>488.7</b>			<b>488.7</b>
	<b>Total – Voluntary</b> 16,592.1	<b>Total – Earned (charitable activities)</b> 19,644.2	<b>Total – Earned (activities for generating funds)</b> 4,486.0	
<b>Investment</b> The proceeds generated from investments and cash balances.				<b>3,039.4</b>
<b>Total</b>				<b>43,761.6</b>

Voluntary sector income can be broken down and analysed in different ways. There are two main types of voluntary sector income: earned and voluntary. These income types come from five main sources: individuals, government, voluntary sector, private sector and the National Lottery. In addition there is income from investments (the proceeds generated from investments and cash balances). The table on the opposite page explains these different types and sources in more detail, including up to date figures for each.

## All sources of income increased in 2013/14 except for National Lottery, which fell slightly

- £1.1bn (21%)  
Cost of generating voluntary income
- £3.9bn (72%)  
Cost of generating earned income

## In 2013/14 £4.20 was raised for every £1 spent on fundraising activities

Ratio of cost of generating funds (excluding investment management) to income generated (earned and voluntary income from all sources), 2008/09 to 2013/14

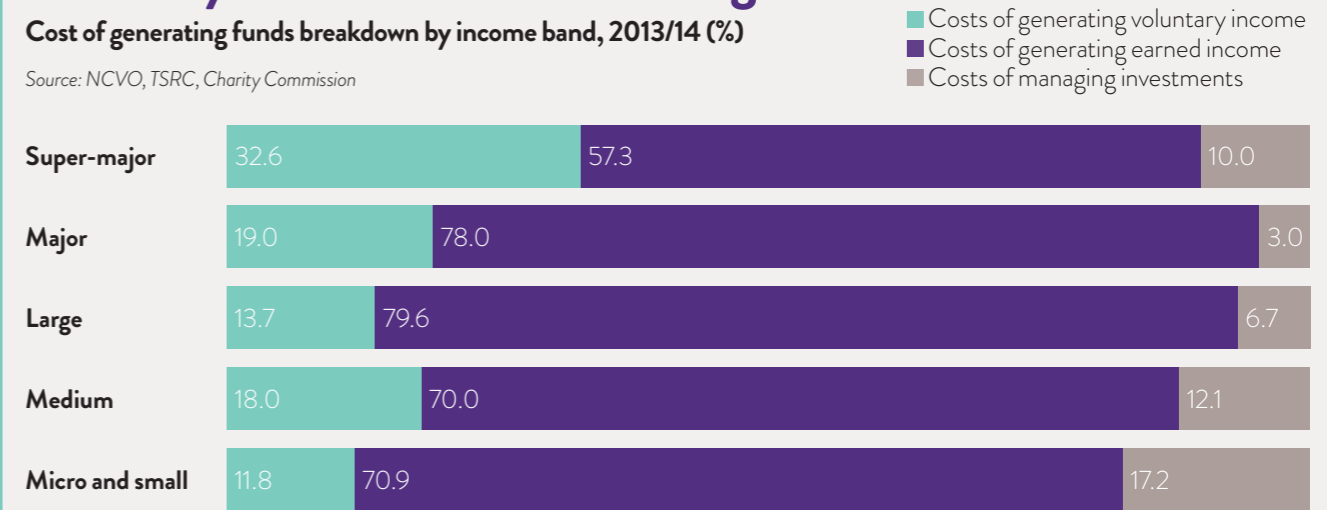

Source: NCVO, Charity Commission

## Larger organisations spent more on generating voluntary income than smaller organisations

Cost of generating funds breakdown by income band, 2013/14 (%)

Source: NCVO, TSRC, Charity Commission

We calculate a fundraising ratio that takes into account all voluntary income and the earned income from activities that generate funds, over the total amount spent on generating funds less the amount spent on managing investments. It provides a good overall indication of fundraising performance by capturing the full range of fundraising income and costs.

# GRANT MAKING

As well as receiving grants (see section on Income Sources on page 24), the voluntary sector also gives out grants as foundations and grant-making organisations. These are distributed to other voluntary organisations, individuals, universities and government bodies.

Interested in grant making? Keep an eye out for upcoming data from the ESRC-funded Civil Society Data Partnerships project, carried out by NCVO and TSRC, which has collected grant making data from trusts, foundation and local authorities [tsrc-ncvo-csdp.com/](http://tsrc-ncvo-csdp.com/)

# £5.3bn

in 2013/14 the voluntary sector made grants worth £5.3bn, an increase of nearly £300m from 2012/13.

## The top ten largest grant makers by total spending on grants (£m)

Note: figures are taken from the latest available accounts as of February 2016.

# LIABILITIES AND LOANS

Liabilities are the financial obligations or debts that voluntary organisations have. These can include loans, pensions, taxes owed, accruals, and grants committed in advance and are classified as short-term (due within one year) or long-term (due in more than one year). In 2013/14 the sector's total liabilities were £15.6bn.

Find out more about the voluntary sector's pension liabilities: [data.ncvo.org.uk/a16liabilities](http://data.ncvo.org.uk/a16liabilities)

# INVESTMENTS

Investments are assets primarily in the form of equities, government securities, unit trusts and investment property. They provide an independent income source for voluntary organisations with assets to invest. In 2013/14 investment income was just over £3bn.

Want to know how investments are distributed between different sized organisations? Or how the value of investments have changed over time? [data.ncvo.org.uk/a16investments](http://data.ncvo.org.uk/a16investments)

## Nearly two-thirds of investment income comes from dividends

## Voluntary sector definition

As in previous Almanacs, the “general charities” definition is used to obtain estimates for the voluntary sector. Included in this definition are those registered charities that meet the following criteria: formality, independence, non-profit distributing, self-governance, voluntarism and public benefit.

## Voluntary sector methodology

Financial data for a sample of 7,500 of these organisations was obtained by entering data from the charities’ annual accounts. This data entry process was carried out on behalf of NCVO by the Centre for Data Digitisation and Analysis at Queen’s University, Belfast.

Before use, the data is cleaned to remove significant errors, and undergoes a series of checks to ensure validity. Those records where accounts were submitted in a foreign currency were converted to Pounds Sterling. To ensure consistency all values were converted to April 2014 prices using the retail price index.

Supplementary data from SCVO and NICVA is used to produce estimates of the UK population. Due to rounding figures, some percentage totals may not sum to 100%.

Sub-sectoral analysis is based on assigning charities to categories in the International Classification of Non-profit Organisations (ICNPO). Within the Almanac, voluntary organisations are divided into six groups based on their income. Each group is named to make it easier to discuss the findings and place them in context. For the first time this year we have included a “Super-major” group including charities with more than £100m annual income.

## Charitable giving

Charitable giving data is from the CAF UK Giving 2014, based on a survey of 5,068 individuals conducted by GfK NOP.

## Workforce

Our employment figures are largely based on Labour Force Survey (LFS) data. The LFS surveys an estimated 60,000 private households every quarter. By pooling data for unique individuals from four quarters, it is possible to produce reliable estimates of the sector’s workforce. Weighting is used within the LFS to compensate for non-response rates in certain groups and produce population estimates.

## Volunteering

This data draws on the Citizenship Survey (2001-2010/11) and Community Life Survey (2012/13-present), the best sources of data on rates of volunteering in England. There was no survey in 2011/12 between the two surveys. The measures used here were common to both surveys. The data collection methods were also broadly similar. However, there was a marked change in data collection between the second and third wave of the Community Life Survey, with the sample being reduced from 5,000 in 2013/14 to 2,000 in 2014/15.

### Changes to trend data

Some trend data for 2011/12 and 2012/13 has been changed from the results published in previous Almanacs. This is due to improvements in methodology and data available, and particularly affects figures for income and assets. For a full explanation of the changes see: [data.ncvo.org.uk/a16methodology](http://data.ncvo.org.uk/a16methodology).

For more information on the methodology see [data.ncvo.org.uk/a16methodology](http://data.ncvo.org.uk/a16methodology)
